

ALLERGY & ASTHMA CENTER ADULT & PEDIATRIC CARE

NOW TESTING FOR METALS AND SURGICAL IMPLANT ALLERGIES

10-15%
of the
world's
population
is allergic
to one or
more
metals.

COMMON METAL & SURGICAL ALLERGENS

Cobalt
Titanium Alloys
Nickel
Ceramics
Polymers
Plastics
Adhesives
Topical Antibiotics

The Allergy & Asthma Center is proud to introduce our newest, and most comprehensive patch testing method. This new system has been specifically designed for patients with suspected metal, plastic, or topical antibiotic allergies. This panel not only includes commonly used metals and plastics, but other elements that may make up alloys, topical antibiotics and resins. This method allows our allergists to work with you to determine which of our 54 common implant allergens you should be tested for.
